

DURABLACK® CO₂ LASER MARKABLE ALUMINUM

The Horizons Imaging Systems Group (ISG) offers DuraBlack®, a CO₂ laser markable aluminum for durable, on-demand marking for harsh operating environments. In side-by-side tests, the company says that DuraBlack outperforms black anodized aluminum and laser markable acrylic tape in select applications. DuraBlack is resistant to sunlight (UV-radiation), abrasion, high-temperatures, salt-spray and chemical exposure. Because of its ability to perform across a range of challenging environments, DuraBlack meets several government, industrial and military specifications, including MIL-STD 130N, A-A-50271 (MIL-P-514D) and MIL-STD-15024F, Type L. DuraBlack is the preferred material for MIL-STD-130 compliant IUID barcode labels and other outdoor signs, plaques and labels.
